

**Metric No. 3.2.1 [2021-2022]**

The Institution has created a sustainable ecosystem for creation and smooth transfer of knowledge, along with encouraging innovations in teaching-learning method. The global pandemic has resulted in a paradigm shift in pedagogy, and the transfer from classroom teaching to virtual platforms and reverting to blended mode and physical classes in the past year has been a smooth experience for teachers and students alike. The college has initiated and maintained automated systems for information processing and dissemination, paper-less file processing for official work.

Our college has hosted workshops on research methodology (MOOCs, Swayam, etc.); conducted several social outreach programmes and educational drives to reach out to the under-privileged during the past year. Faculty members of different departments have completed courses on innovative teaching methods as well as created web-based open-access educational materials to reach out to a larger part of society beyond the college boundaries.

Different departments have used multiple online platforms for online classes during the pandemic period and have equally smoothly transitioned back to classroom teaching during the last year.
