

Workshop for faculty members of Geography with Flow-meter on 09.08.2023

A flow-meter for academic and research purpose was purchased by the college which needs some demonstration for proper utilization and accuracy in research work. A.D.K Instrument Company of Gaziabad, Uttar Pradesh had supplied the Sontek Flow-meter instrument to our college. Department of Geography had requested them to arrange in-person training for the faculty members of the department. Three official demonstrators came from the company on 09.08.2023 and delivered us live field training about the purpose, utility and maintenance of the instrument from 11.30 a.m. to 6.30 p.m. They had presented a power-point presentation about the device in the pre-field section.

We faculty members and the trainers had visited near Outram-Ghat of Ganges at Kolkata. Sea Explorer Institute had helped us to conduct the training program with prior permission and help by professional trainer who had helped our team by immersing the flow-meter instrument inside the water of the Ganges for collection of data.

Then we came back in the Geography Laboratory where post-field work was done. Data collected from the field were analyzed with Flow trakewer2 software.
